If you have or are presently taking an introductory programming course in any high-level programming language (C, C++, Java, Python, Ada, Ruby, Scheme, etc.), you satisfy the necessary prerequisite. If your equivalent course did not use the Python programming language, it is not a big problem. The same introductory programming concepts apply. You will just need to do some additional reading in the textbook (Chapters 1-10) to understand the Python syntax of if statements, for statements, etc. The textbook author has an overview of all the essential differences between Python, Java, and C++ at his web-site: http://home.wlu.edu/~lambertk/python/. Plus, there are many free, on-line Python tutorials at http://www.python.org/
